"My Favorite Amphibian that I choose was the Strawberry Poison Dart frog"

I chose the Strawberry Poison Dart Frog because it was every interesting to me. let me tell you about the amphibians I chose the Strawberry Poison Dart Frog is a species of frogs its body length is 1 to 2 inches the diet is insect the home is Central and south American its scientific name is Dendrobates Pumilio.

The 3 incredibly interesting things about this amphibian is

**most poisonous frogs have bright colors that warn predators that they are dangerous to eat.*

**yet this species has eight times more poison in its skin than more-colorful poison dart frogs.*

**Strawberry Poison Dart frog is dark and very hard to see in the shadowy rain forest.*

The class of the Strawberry Poison dart frog is an AMPHIBIAN the order is frogs and toads and its family is the tree frogs.

♥Frog Dissection♥

Virtual— the virtual was pretty awesome when we did it I thought it was cool because it showed you all parts of the frog's body and showed use were to dissect it at and I thought it was pretty cool because we got to dissect it on the computer to.

Real—the real dissection we did today was pretty cool. We got to learn that the frog hade many parts that the humans have, the stomach in the frog was like very medium and when we took the stomach out it hade some green stuff in it like it looked like its food that it hade eaten the frog stunk really bade and it was like rubbery and slimy when we were dissecting it but over all it was very interesting and cool to work with.

♥Poison Dart Frog♥

Materials for Terrarium

- *Peat Moss
- *Aquarium Gravel/ Rocks
- *Carbon
- *2 Potted Plants
- *Terrarium Container
- *Plants

Procedure

- 1. Add a layer of rocks across bottom of container.**
- 2. Add 1tsp of carbine**
- 3. Add 4 cups of peat moss(soaked)**
- 4. Take plants out of pots, shake off excess dirt, dig small hole, put in plant, pack down gently**
- 5. Wet everything down so it is very**

What I thought about the terrarium class we took.

The terrarium class was every interesting to me because I learned a lot of new things about toads, frogs, newts, and salamanders. Some of the new things that I learned about the frogs are that some of the frogs can be every poisons and dangers to people and animals and another thing that I learned in this class is how to make a terrarium.
