

My favorite amphibian the red bellied toad

I choose the red bellied toad because they it looks really cool why I choose this toad. I choose it because it has strong poison. Also because the young is ready two mates in two years. The class is amphibians the order frogs and toads the family is toads. The species is toad. The length is 1 and half it eats insects and invertebrates the home of this animal in

Europe. The scientific name is bambina bambina. You can't keep one as a pet because it is poisons. The virtual dissection was all right because I would have known how to do at first. The real I liked because you could actually feel the frog guts.

How to make a terrarium

Materials:

- Peat moss
- Aquarium gravel\rocks
- 2 1\4potted plants and carbon
- Terrarium container

Procedures

Aquarium gravel\rocks 2

1. Add a large layer rocks across the bottom
2. Spoons of carbon
3. Take plants out of container shake off some dirt.
5. Wet everything down really good.

I liked making it because of touching the dirt also planting the plants

This class was a very good experience I liked dissecting the frog. This was the best.
